ProModel® AutoCAD® Edition

Design, Simulate, and Optimize Your Factory Layout Directly in AutoCAD®

1 Create an AutoCAD layout using Factory Assets. Then build the process model using flows and other features from the ProModel Ribbon on the AutoCAD menu.

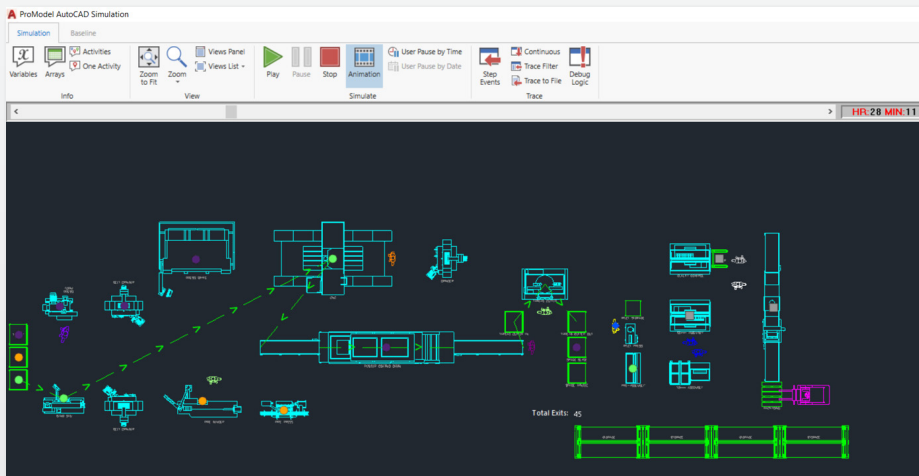

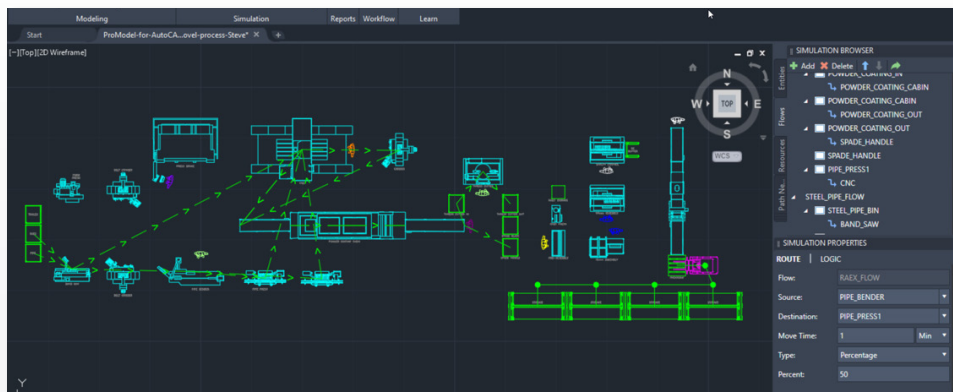

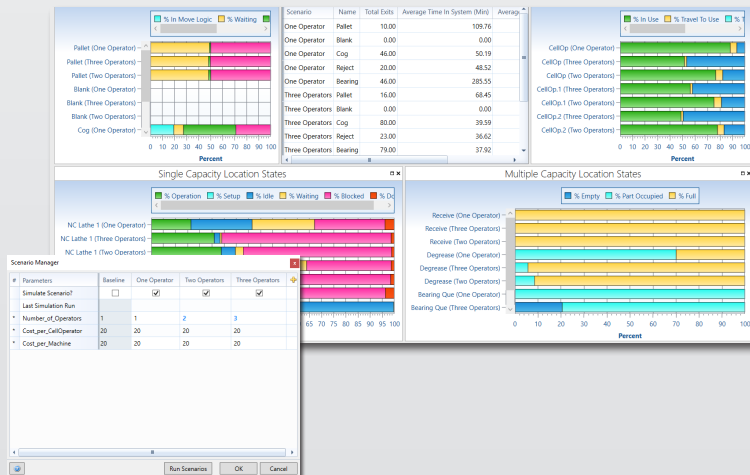

2 Press "Simulate" and watch your model run with animation in AutoCAD.

3 View dynamic model output metrics and run "What-If" scenarios. Compare and contrast your "What-If" scenarios in automatically generated reports that display the KPI's that define an optimized system.
